## AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

## LISTING OF CLAIMS:

1. (currently amended): An electroconductive fine particle,

which has a gold coating formed by electroless gold plating on the surface of a nickel undercoating,

the amount of nickel dissolved in a dissolution test of the electroconductive fine particle with nitric acid being 30 to 100 µg/g,

wherein the electroconductive fine particle is produced by a method, comprising forming a gold coating wherein a reducing agent, causing oxidation reaction on the surface of a nickel undercoating but not causing oxidation reaction on the surface of gold as deposited metal, is present on the surface of the nickel undercoating, thereby reducing a gold salt to deposit gold.

2. (currently amended): A method of producing the electroconductive fine particle according to Claim 1.

wherein the method allows a reducing agent, causing oxidation reaction on the surface of a nickel undercoating but not causing oxidation reaction on the surface of gold as deposited metal, to be present on the surface of the nickel undercoating thereby reduces a gold salt to deposit goldthe reducing agent is a sulfite salt.

3. (original): An anisotropic electroconductive material, AMENDMENT UNDER 37 C.F.R. § 1.111

Application No.: 10/567,461

Attorney Docket No.: Q93093

which comprises the electroconductive fine particle according to Claim 1 dispersed in a resin binder.
